Atascazoo Animal Hospital- Surgery Release

All pets that present for elective procedures are required to be up to date on the following:  
Dogs- Rabies, DHPP, Leptospirosis, Bordetella, Influenza vaccines and negative intestinal parasite exam.  
Cats- Rabies, FRCP vaccines and negative intestinal parasite exam

Description of Pet \_\_\_\_\_ Date of Discharge \_\_\_\_\_

Procedure to be Performed \_\_\_\_\_

Please list all medications your pet is on \_\_\_\_\_

\_\_\_\_\_

- Does your pet take any CBD supplements?     Yes     No
- Does your pet have a history of seizures?     Yes     No
- Is there a history of anesthetic complications?     Yes     No

As the responsible party for the above-described pet, I give the Doctors of Atascazoo Animal Hospital permission to perform the listed surgical procedures. I have been advised as to the nature of the procedure(s) and the risks involved. I understand that complications including but not limited to infection, cardiac arrest, and death could result. I acknowledge that no guarantee has been made as to result or cure. I authorize my veterinarian to do whatever is deemed necessary should complications arise.

Estimated Procedure Cost \_\_\_\_\_

Pre-Anesthetic Blood Testing:

Like you, our greatest concern is the well being of your pet. Before putting your pet under anesthesia, we will perform a physical examination. However, many conditions, including disorders of the liver, kidneys and blood, may not be detected unless blood testing is performed. Such tests are especially important before anesthesia.

For these reasons, we strongly recommend that all patients receive a blood screen before such procedures. The total cost of these important tests is \$113.93.

\_\_\_\_\_ Yes, I want my pet to have a blood screen performed prior to anesthetic administration.

\_\_\_\_\_ No, I decline the blood screen and have been informed of the risk involved to my pet's health in doing so.

**Pain Management:**

Research has indicated that while pets may appear to withstand pain better than humans do, they still experience pain to a great degree. While undergoing surgery, your pet will receive anesthetic drugs that prevent pain. However, additional medications have recently become available that now enable us to safely and effectively control the level of your pet's discomfort after surgery. For non-routine surgery pain meds can be included at an additional cost.

**Electrocardiogram (EKG):**

Used to detect heart arrhythmias. Especially important to detect heart problems before anesthesia.  
Cost for EKG \$54.87

\_\_\_\_\_ Yes    \_\_\_\_\_ No

\_\_\_\_\_ Patients who are spayed or neutered at our hospital may receive a small tattoo on the abdomen to indicate that they are altered.

Are there any other treatments or procedures you would like your pet to have today?

Phone # \_\_\_\_\_ (Daytime)

Note: Dogs presented for spaying, if pregnant or recently in heat, will be charged an additional fee.\*\* If currently bleeding while in heat, we will not spay your pet due to possible surgical and post-operative complications.\*\* Cats presented for spaying, while pregnant will be charged an additional fee. All pets must be current on vaccines or else they will be given before the pet has surgery. These vaccines must be administered by a licensed veterinarian. The owner must provide proof of vaccines prior to surgery. The declaw patients will be hospitalized for 2 nights after the surgery, and can be discharged after 10 a.m. on the second day. Our staff does not remain on the premises after closing. All animals must be free of internal and external parasites. IF INTERNAL OR EXTERNAL PARASITES ARE PRESENT, THEY WILL BE TREATED AT OWNER'S EXPENSE.

Intial \_\_\_\_\_

\_\_\_\_\_ I realize that my pet may be seen/treated by multiple doctors during his/her stay with us.
